

Every second counts when you're on scene—but critical data is trapped across multiple systems

Public safety data is exploding, yet officers waste valuable time searching through separate databases for the information they need. While you're manually searching multiple systems, crucial insights that could protect officers and solve cases faster remain hidden.

The result? Critical details to help keep officers safe and protect the community are slow to be found. Links that could identify suspects remain buried—delaying arrests and justice for victims.

Agency-Wide Crime Data Solution

CrimeTracer Gen3 transforms investigative search into a comprehensive crime-fighting data platform—combining automated patrol briefings, natural-language search, and AI-driven analysis with access to more than 1B structured and unstructured records from over 2,100 agencies nationwide. Built to deliver the right data fast, CrimeTracer unifies critical information from your own IT systems and from partners across the city, county, state, and country. Through our alliance with Thomson Reuters CLEAR®, officers and analysts can access both private law enforcement data and essential public records data in one place—without toggling between disparate applications.

AI-Driven Analysis

CrimeTracer Gen3 leverages advanced technology to analyze vast amounts of CJIS-compliant public safety data, offering voice-enabled natural language search capabilities with the CrimeTracer Chatbot, and link analysis that connects critical information across jurisdictions to provide actionable insights to patrol officers, analysts, investigators, and command staff.

Easy Access to Actionable Insights for Every Shift

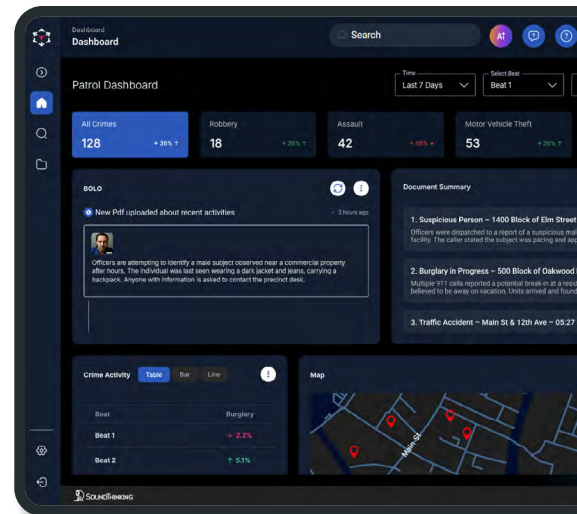

CrimeTracer's patrol dashboard automatically generates shift briefings with BOLOs, recent incidents, and crime patterns, tailored to geographic areas, ensuring patrol officers start each shift with critical situational awareness. Centralized case folders house related incidents and leads in one organized view to easily reveal connections and accelerate investigations.

At-a-Glance Intelligence, Zero Guesswork

Give your team time back with reports built for the way law enforcement teams work. Instead of digging through RMS, CAD, and separate databases, officers, supervisors, and analysts get clean, at-a-glance entity summaries of investigative leads, locations, vehicles, and related records. The trends dashboard visualizes crime counts, trends and hot spots, with interactive charts and quick filters to spot emerging problems. The AI-generated summary of any document in CrimeTracer instantly surfaces key facts from lengthy reports and records, reducing time spent on manual review. The results are faster briefings, smarter deployment, and safer decisions in the field.

Seamless Integrations

CrimeTracer Gen3 is accessible from any centrally managed device and across all compliant networks. Integrating with your existing infrastructure, CrimeTracer also features seamless, native integration across other SafetySmart™ platform solutions, including ShotSpotter®, PlateRanger™, and CaseBuilder™.

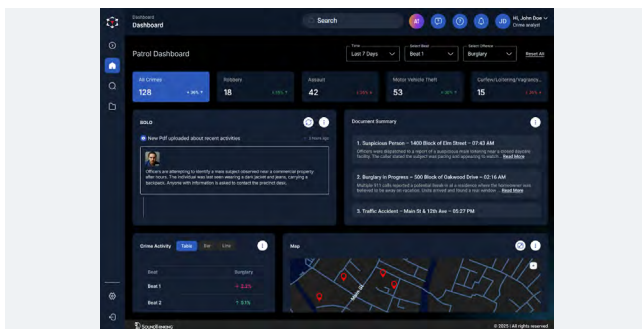

Key Features

-  **Patrol dashboard**
-  **Enhanced natural-language search Chatbot**
-  **AI summarization**
-  **Centralized case folders**
-  **Entity summary pages**
-  **Trends Dashboard**

Benefits

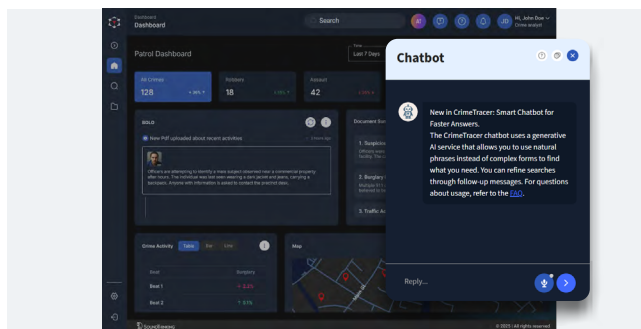

-  **Enhance situational awareness**
-  **Accelerate investigations**
-  **Actionable insights for patrol and command**
-  **Connects critical information across jurisdictions**
-  **Intuitive and easy-to-use UI**

Patrol Dashboard

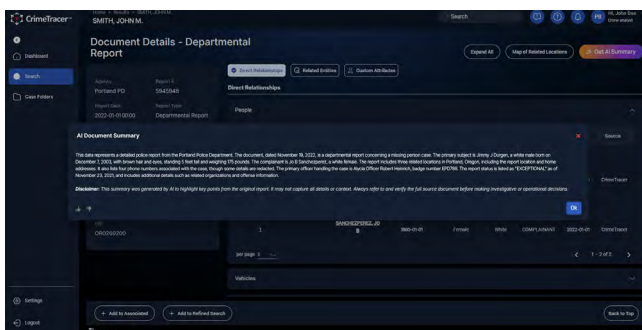

Automatically generates shift briefings with BOLOs, recent incidents, and crime patterns tailored to specific geographic areas, ensuring patrol officers start each shift with critical situational awareness.

Enhanced Natural-Language Search

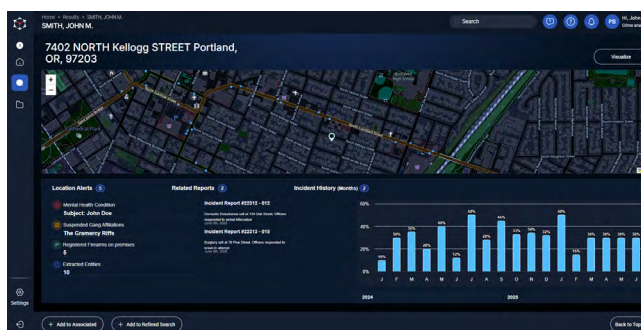

The voice-enabled Chatbot allows officers to query vast amounts of CJIS-compliant public safety data conversationally without needing extensive technical expertise.

AI Summarization

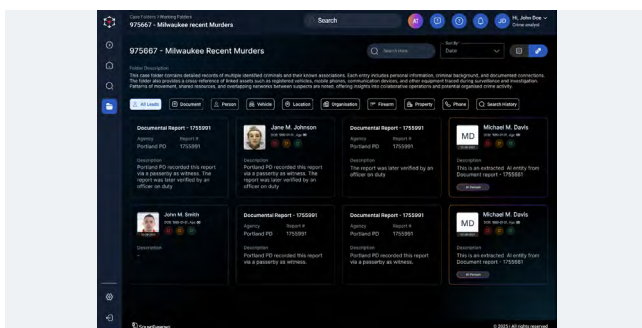

Instantly surfaces key facts from lengthy reports and records, significantly reducing time spent on manual document review.

Entity Summary Pages

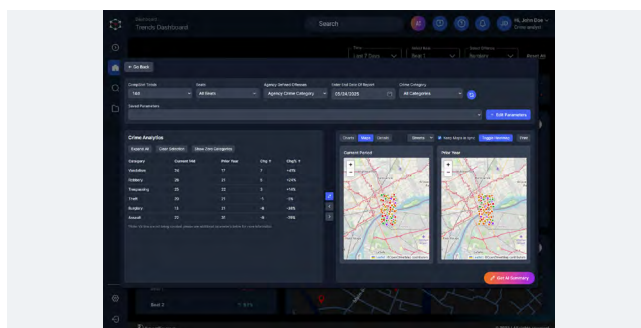

Provides clean, at-a-glance entity summaries of investigative leads, locations, vehicles, and related records.

Centralized Case Folders

Consolidates related incidents and leads into one organized view, making it easy to reveal connections, identify patterns, find links between cases, and accelerate investigations.

Trends Dashboard

Gives Command Staff and Analysts a dynamic, citywide view of crime data with interactive charts and filters to identify trends, drill into incidents, and quickly turn insights into action.
