

Turn Scattered Data into Decision Intelligence

Data-Supported Operational Decisions for Every Role

Your data holds the key to better operational decisions, but accessing it often requires separate systems, filters, exports, and manual analysis that eat up valuable staff time. A patrol officer heading into a shift, a supervisor planning a weekend deployment, a detective connecting cases across agencies or looking for new leads, and a commander preparing for CompStat all need different things from different data. When every decision faces scrutiny, finding trends, clusters, and investigative leads shouldn't start from a blank page.

What Field Agent Does

Ask in Plain Language

Field Agent is a conversational companion built for public safety that lets users ask questions by voice or text, in plain language. The technology retrieves, analyzes, summarizes, maps, charts, or exports relevant data from your ShotSpotter®, CrimeTracer™, and other connected agency data sources including CAD, RMS, LPR, and JMS.

Maps, Charts, and Visualizations

Field Agent can place incidents, points of interest, clusters, color-coded layers, or custom geospatial shapes on a map. Users can manage map layers and outputs. Field Agent can also create charts, tables, hotspot-style analyses, and heat maps, and break down trends by high-activity area, beat or district, incident type, and more.

Reports and Briefings

Field Agent creates custom, presentation-ready reports and executive summaries, from gunfire clusters to crime trends by time and area.

Case Analysis and Research

In CrimeTracer, Field Agent Investigate is a skill purpose-built for AI case investigations. It searches over 1 billion CJIS-compliant records, finds the needle in the haystack, and leaves no stone unturned across jurisdictions. Investigators review every result and choose what goes into the case folder. Case folders centralize evidence and enable secure sharing, speeding investigations and raising case closure rates.

ILS and Audio

With ShotSpotter, Field Agent can generate standard Investigative Lead Summary reports for relevant incidents and play incident audio when available. Audio playback is available in Field Agent conversations.

EXAMPLE PROMPT 1

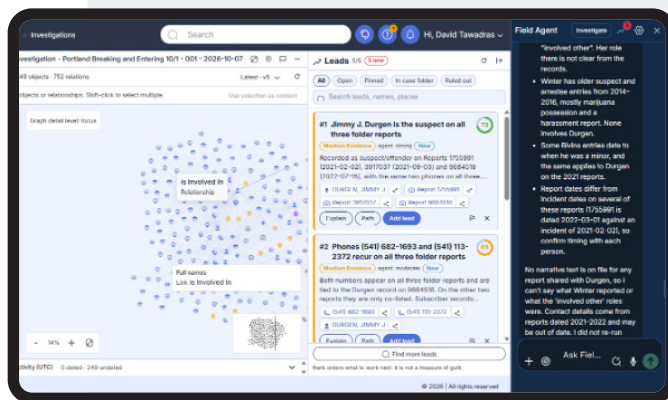

Identify crime series involving similar burglaries over the last 90 days.

EXAMPLE PROMPT 2

I have a community meeting tonight; give me a weekly crime summary across all districts with year-over-year percentage change. Build me a report broken down by district.

EXAMPLE PROMPT 3

Summarize all reports, statements, and evidence related to [suspect] and find all associates tied to [suspect].

Built for Every Role in Your Agency

Patrol Officers

Situational awareness, shift preparation, and recent activity in your area

Detectives & Investigators

Find leads, connect the dots, and close cases faster with Field Agent's Investigate skill.

Crime / Intel Analysts

Trends, clusters, and exports quickly using data from disparate sources, without starting from a blank page.

Command Staff

Briefing-ready summaries for deployment decisions and community meetings.

Data sources: ShotSpotter gunfire data; CrimeTracer law enforcement records, including RMS, CAD, JMS, court records, warrants, NIBIN, arrest, crash, field interviews, crime bulletins, and pawn tickets. PlateRanger license plate reads, OpenStreetMap points of interest and boundaries, and agency-provided geodata.

Privacy, control, and accountability: Your agency keeps full control of its ShotSpotter and CrimeTracer data and decides who can access it. Your Field Agent conversations are not used to train the AI model.

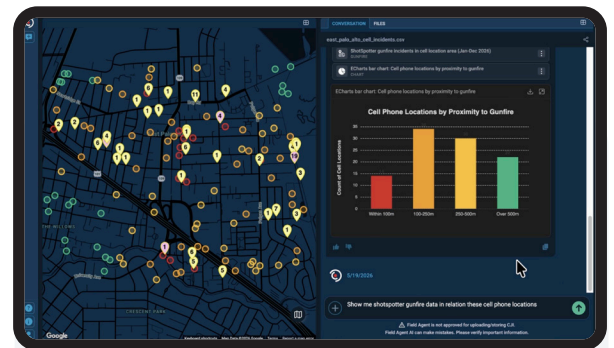

Source transparency: Users can ask Field Agent where it pulled data from or what source it used for any answer, so investigators can verify a lead before acting on it.

AI engine: Field Agent uses Anthropic's frontier models to understand questions and conduct analysis.

Supported file uploads: CSV, Shapefile, KML, GeoJSON, and JSON files can be uploaded to a conversation for analysis, mapping, comparison, and reporting.

Exports: Field Agent can create CSV exports that can be opened in Excel or other tools. It can also export map layers as GeoJSON and shapefiles, and charts as PNG or PDF files.

Languages: English, Spanish, and Portuguese are supported across the Field Agent interface and conversational experience.

Field Agent Benefits

- ✓ Better operational decision-making with instant insights
- ✓ Faster briefings and ready-to-present outputs
- ✓ Voice or text—ask however you work
- ✓ Less manual work, more time on mission

See how Field Agent can turn your data into answers, decisions, and action.
